Save Money, Save Time and Reduce Liability

The Immediate Benefits of Using One Healthcare Solution's MediTalk™

If you are using a service or have employees transcribing your notes, it is obviously costing you a great deal of money. With MediTalk™, we allow the physician to bypass the traditional transcription process. You simply select an outline and start dictating.

MediTalk™ software allows physicians to dictate directly into their final document to eliminate the time-consuming tradition of "dictate-transcribe-review-revise-approve" transcription process. MediTalk™ is the natural way to speak to your computer.

MediTalk™ software gives the physician the tools they need to eliminate mistakes and gives them the ability to add details with custom templates, phrases and voice macros. Physicians have the control to edit and proof their documents as they talk. Most physicians have at one time or another proofed notes that were completely different from what they dictated into their tape recorder. MediTalk™ software helps to eliminate the risk of erroneous information getting into the chart. You see your dictation as you speak.

Automated Transcription Management Process

- Put doctors back in control of the dictation process.
- Over 1 million dictations created with MediTalk™ Voice Recognition software.
- Cut out transcription costs, increase time management and minimize legal liability.
- No more turnaround review, revise, and send back.
- Cut out redundant repetition with custom templates and macros.
- Documents full of rich accurate information that is pertinent to the visit.
- Letter quality documentation that doesn't look like a computer-generated form.
- Get referral letters out quickly and efficiently.
- See what you're saying while dictating.
- Custom medical dictionaries for 32 different specialties
